

artichoke

APPLICATION TIMES, MODES AND DOSE

1st application: when the plant is 10-15 cm in height.
Dose: 2 L/Ha (foliar application) or 5 L/Ha (soil application).

2nd application: when the second head begins to sprout.
Dose: 3 L/Ha (foliar application) or 5 L/Ha (soil application).

DISINFECTING CUTTINGS

Submerge the artichoke cuttings for 30 minutes in a tank that contains:

- 100 litres of water.
- 300 ml of **BROTOMAX**®.
- 300 ml of **CORRIZ-AM**®.

together with pesticides normally used.

BENEFITS AND ADVANTAGES

- Good floral differentiation a few weeks after planting.
- Balanced vegetative growth, giving the plant open vegetation.
- Greater number of secondary flowers: improves production.
- Larger secondary fruit.
- Thicker bracts.
- Uniformity, improves fruit quality.
- Precocity: earlier appearance of the second head.
- Boosts plants natural defence systems: resulting in healthier and more resistant plants.
- Protection of chlorophyll due to the antioxidant power of **BROTOMAX**®.
