

cereal

APPLICATION TIMES, MODES AND DOSE:

1st foliar application: at the beginning of tillering

2nd foliar application: on flag leaf.

Extra application: After the appearance of some type of stress (drought, cold, herbicide...)

Dose: 1,5 - 2 L/Ha.

BENEFITS AND ADVANTAGES:

- Activates and stimulates vegetative growth, greater development of plant mass.
- Increase in number of offspring.
- Increase in number of spikes.
- Greener and more productive cultivation.
- Avoids stress and recovers the plant after damage caused by biotic and abiotic factors.
- It is compatible with most of the preparations normally used (Consult the Technical Service).

RECOMMENDATIONS:

To improve the effectiveness of phytosanitary and nutritional treatments, mixing with **QUASSAR®** is recommended for its high surfactant, adherent and penetrating power.

Foliar dose: 1,5 L/Ha.

To overcome moments of phytotoxicity produced by herbicide (glyphosate, metribuzine, etc.), we recommend two applications of BROTOMAX®, spaced 15 days apart, with which we will achieve:

- Generate a vegetative improvement.
- Enhance the multiplication and prolongation of the roots.
- Recover the crop.

Foliar dose: 2 - 3 L/Ha.
